PROJECT PROFILE

FORUM – A career site(MERN stack)

Developed a full-stack job portal that enables companies to post vacancies and manage hiring, while allowing candidates to register, log in, browse available jobs, and apply securely. The application integrates **React.js** for the frontend, **Node.js** and **Express.js** for the backend API, and **MySQL/MongoDB** for data persistence. Implemented **JWT-based authentication** to ensure secure access to user and admin functionalities.

Emotchy – Emotion Recognition Wearable (ESP32-CAM, XGBoost, Python)

Designed and developed an **AI-powered wearable device** capable of identifying facial emotions in real time. Integrated **ESP32-CAM** module with **XGBoost** classifier to perform image capture and expression classification. Engineered Bluetooth-based data transmission to external devices for live monitoring, optimised preprocessing of facial images to improve recognition accuracy, and reduced latency. Utilised Python, OpenCV, scikit-learn, and embedded C for model training, deployment, and device integration.
